eBeam Edge+ has been tested on many different TVs in different situations, and the Edge+ delivers the same great performance on a display as it does with a projector. Due to differences in TV construction, performance can vary slightly from display to display, but most modern displays are fully compatible with eBeam.

! It is important that the display is LED backlit to keep the temperature of the display surface close to room temperature. Plasma TVs and older LCD TVs are not ideal for use with eBeam Edge+.
